

Need a Soil Scientist for your Planning Application?

**ENVIRONMENTAL
CONSULTANTS**

SCIENTIFICALLY TAILORED
CONSULTANCY FOR
ENVIRONMENTAL REGULATION
AND COMPLIANCE

We specialise in a range of soil-based services to help get your plans into action.

Contamination Surveys

Does your site have a history that presents a potential contamination risk to your development? 4R Environmental Consultants deliver high quality Phase 1 contamination surveys and walkover assessments tailored to meet individual Local Authority requirements. We design and provide site-specific Phase 2 investigations, Phase 3 remedial work and Phase 4 verification as required using our qualified and accredited **Soil Testing, Soil Specification** and **Soil Monitoring** specialists.

Agricultural Land Classification

Our consultants are fully trained to provide accurate, comprehensive and unbiased ALC assessments of best and most versatile land in line with Planning Authority requirements. We combine full site-based auger borings and survey data with recommended published government data sets to provide robust categorisation and mapping.

Need a Soil Scientist for your Planning Application?

Soil Testing

What is in your soil? Is it harmful or beneficial? Can it be used for landscaping or site profiling? Can it be used to make gardens or parks? 4R Environmental Consultants can help you answer these critical questions. Avoid unnecessary imports of expensive topsoil and make the most of your site's natural resources with our soil testing and characterisation service – applicable to agriculture, restoration and development projects.

Soil Specification

What can I grow in my soil? Will it support the end use of my site? Often used in conjunction with our testing service, we can design a unique soil specification for the different areas of your site. Ensuring final profiles are appropriate for the end use they support, is key to project success and minimises the risk of expensive plant/crop failure.

Soil Monitoring

Meet your ongoing consent conditions through regular soil monitoring and movement tracking. Many of our clients have to mitigate risks associated with potential contamination identified on their development sites. 4R Environmental Consultants test exposed soils, track on-site movements and match specifications to the most appropriate end use. This ensures optimum soil preservation and minimises the need for space-demanding quarantine and costly disposal.

Our team are individual members of:

- British Society of Soil Science (BSSS)
- Institute of Professional Soil Scientists (IPSS)
- BASIS Professional Register

We are:

- FACTS Qualified Advisors
- CITB/CSCS Operatives
- WAMITAB Continuing Competence Certificated
- ISO Accredited
