

Air Crashes

INNOVATORS IN WASTE SCIENCE
AND RECYCLING TECHNOLOGIES

When any accident occurs it is imperative that the potential environmental liabilities are dealt with as swiftly and efficiently as possible, not only due to the ever increasing regulation of the environment, but also due to the huge costs to human health and the environment that can result as a consequence of an incident.

Following air disasters materials such as jet fuels/fluids, potentially toxic metals, unknown cargo etc, can cause damage to water courses, soil and atmosphere following their discharge on impact, or subsequent fire.

Our consultants at 4R Group have extensive experience of wreckage removal and clean up of air crash sites worldwide, having dealt with small helicopter crashes through to large 747-200 cargo plane catastrophes.

We are able to provide clients with the support and expertise required to deal with any incident that may occur, at short notice.

Our services include:

- Emergency call-out worldwide
- Liaison with relevant regulators, emergency services and the media
- Management of the wreckage recovery and disposal
- Site investigations including risk assessments
- Laboratory analysis of soils and water from the site
- Remediation of any contamination recorded
- Management of the restoration of the accident site
- Site aftercare management
- Advice regarding potential environmental liabilities resulting from the accident
